# LUXURY TRAVERTINE STONE

## What is Travertine?

A durable and timeless addition; Travertine is a beautiful natural stone and is recognized as one of the most luxurious stone options in the world.

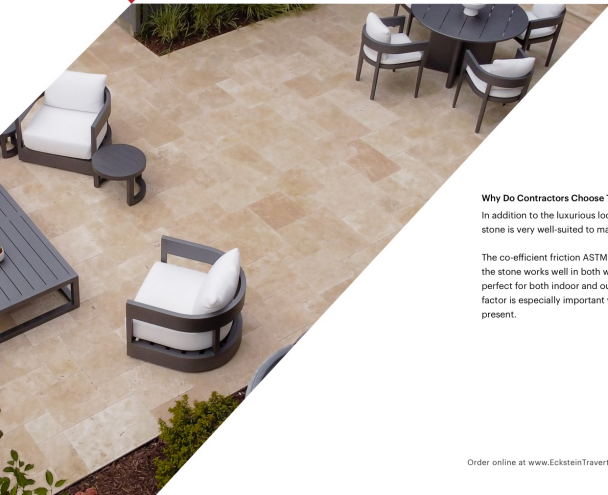

Eckstein Travertine is supplied directly from Mediterranean Europe and is typically found in mineral springs and hot springs. Travertine has been used as a building material for thousands of years.

Travertine offers many benefits over artificial materials such as concrete and concrete pavers. Natural stone is also more durable than artificial materials and can last decades with minimal maintenance. Travertine is frequently used in patios, walkways, and pool surrounds. Most luxurious resorts use travertine pavers around their pool and spa patio areas.

### **Why Do Architects Choose Travertine?**

Travertine is durable and timeless. However, architects often choose this beautiful natural stone because of its look and feel. Travertine is versatile with many color and pattern variations. The rich stone can create a great contrast with other materials, or even with other variations of travertine. Around the world and throughout history natural travertine stone is one of the most luxurious outdoor patio stone options available.

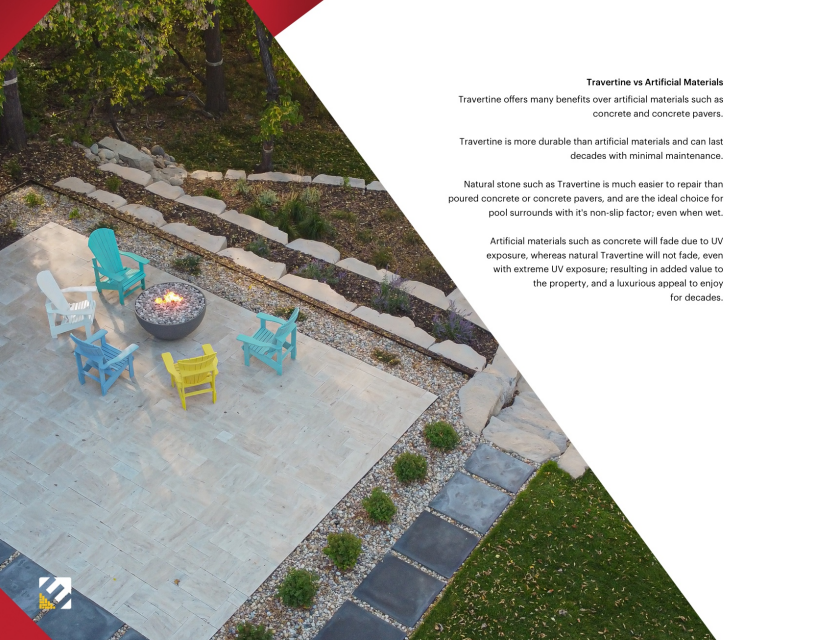

### **Why Do Contractors Choose Travertine?**

In addition to the luxurious look of travertine, this natural stone is very well-suited to many projects.

The co-efficient friction ASTM testing of travertine indicates the stone works well in both wet and dry conditions; perfect for both indoor and outdoor projects. Its non-slip factor is especially important where slippery conditions are present.

#### **Travertine vs Artificial Materials**

Travertine offers many benefits over artificial materials such as concrete and concrete pavers.

Travertine is more durable than artificial materials and can last decades with minimal maintenance.

Natural stone such as Travertine is much easier to repair than poured concrete or concrete pavers, and are the ideal choice for pool surrounds with it's non-slip factor; even when wet.

Artificial materials such as concrete will fade due to UV exposure, whereas natural Travertine will not fade, even with extreme UV exposure; resulting in added value to the property, and a luxurious appeal to enjoy for decades.

# ADVANTAGES

of **TRAVERTINE**

- ✓ More durable than artificial materials
- ✓ Minimal maintenance
- ✓ Does not fade
- ✓ Non-slip - even when wet
- ✓ Cool to the touch
